# DID YOU KNOW HUMAN ERROR AND SYSTEM GLITCHES ARE THE ROOT CAUSE OF ALMOST **HALF** OF ALL DATA BREACHES?

YOU'RE ONLY AS STRONG AS YOUR **WEAKEST** LINK.

TRAINING

Educating your employees on the threats posed to your business and how to detect and mitigate them will provide a proactive approach to squander any attacks before they even get a chance to happen.

GAP ASSESSMENTS

Conducting a vulnerability or gap assessment can help you locate where your weak links are, so that you can focus on making them stronger than ever, and establish a framework that will deter threats before they become a problem.

USE SAFEGUARDS

Putting secure measures in place such as establishing Multi-factor Authentication (MFA), using secure servers and communication channels, and designating a system specifically for work when handling sensitive information can all be actions that can keep your information and business safe.
